

TABISH AFZAL

Data Analyst / Business Analyst

Data Analysis | SQL | Power BI | Excel | Python | Business Insights

Location: Lucknow, Uttar Pradesh, India | **Email:** tabishafzal28@gmail.com | **Mob:** +91-9305281826
LinkedIn: [in/tabish-afzal](https://www.linkedin.com/in/tabish-afzal) | **GitHub:** [tabish022](https://github.com/tabish022)

PROFESSIONAL SUMMARY

Data Analyst in training, currently pursuing B.Com. I enjoy taking raw, messy data and turning it into clear insights using Excel, SQL, Power BI, and Python. I've built 5 real-world projects — from fintech transactions to healthcare supply chains — handling datasets with over 380,000 rows, and I use AI tools to speed up my analysis.

CAREER HIGHLIGHTS

- Built many end-to-end data analytics projects covering Excel, SQL, Power BI, and Python — from raw/messy data to business-ready dashboards
- Hands-on experience analyzing large datasets, including a 380,000+ row, 4-table dataset covering 45 agencies and 320 client engagements
- Modeled a star-schema SQL data warehouse spanning 18,000+ customers, 295 products, and 60,000+ transactions
- Built an interactive Power BI dashboard analyzing 100,000+ transactions across 100,000+ users with KPI and payment-failure tracking
- Skilled at cleaning genuinely messy, real-world data — inconsistent dates, typo-ridden categories, mixed price formats — into clean, analysis-ready datasets
- Experienced building automated Excel dashboards using Power Query, Power Pivot, DAX, and VBA
- Certified across Data Analytics, Data Visualisation, MySQL, Advanced Python, Microsoft Excel, and Microsoft Power BI (Simplilearn / CodeWithHarry)
- Comfortable using AI-assisted workflows to accelerate Python-based data analysis and problem-solving

AREA OF EXPERTISE

● Data Analysis	● SQL / MySQL	● Python (Pandas, NumPy)	● VBA Automation
● Data Cleaning	● Power BI	● Data Visualization	● Report Automation
● Exploratory Data Analysis	● Excel (Power Query/Pivot)	● Dashboard Development	● AI-Assisted Analytics
● Business Insights	● DAX	● Statistical Analysis	● Market/Trend Research

PROJECTS

GrowthBridge Ventures — SEO & Digital Marketing Performance Analytics

Tools: Python (Pandas) | MySQL | Power BI | *Live Dashboard:* [Power BI Report](#) | [GitHub Repo](#)

Role Overview

End-to-end data analyst project covering a deliberately messy, multi-table regional dataset for SEO and digital marketing agency performance — from data cleaning through SQL analysis to dashboard delivery.

Key Responsibilities

- Cleaned a 380,000+ row, 4-table regional dataset covering 45 agencies and 320 client engagements using Python
- Analyzed relational data in MySQL using joins, CTEs, and window functions to uncover performance patterns
- Designed and published a single-page interactive Power BI dashboard to visualize agency and campaign performance

Key Findings & Impact

- Found that small agencies consistently out-perform large agencies on ROAS
- Identified that star ratings show no meaningful correlation with actual campaign performance — challenging a common assumption
- Delivered data-backed insight that supports smarter, performance-based agency selection

SQL Data Warehouse & Sales Analytics

Tools: SQL (Star Schema, CTEs, Window Functions) | [GitHub Repo](#)

Role Overview

End-to-end SQL project modeling raw sales data into a star-schema data warehouse and delivering analytics-ready business insights.

Key Responsibilities

- Modeled a star-schema data warehouse spanning 18,000+ customers, 295 products, and 60,000+ transactions
- Audited data quality and structured the flow from raw data to an analytics-ready layer
- Answered business questions using window functions, CTEs, and customer/product segmentation logic

Business Impact

- Delivered clean, query-ready fact and dimension tables for downstream reporting
- Built reusable segmentation logic to support customer and product performance analysis

PhonePe Transactions Analytics Dashboard

Tools: Power BI | DAX | Power Query | [GitHub Repo](#)

Role Overview

End-to-end Power BI dashboard analyzing PhonePe-style digital transactions across Loans & Insurance products.

Key Responsibilities

- Analyzed 100,000+ transactions across 100,000+ users using Power BI, DAX, and Power Query
- Built KPI tracking for transaction volume, growth trends, and category-wise breakdowns
- Designed payment-failure analysis to flag risk areas across regions

Business Impact

- Delivered a regional, category-wise view of transaction trends and payment failures
- Enabled faster identification of growth opportunities and risk areas across regions

Medical Supply Inventory Risk Dashboard

Tools: Excel | Power Query | Power Pivot | DAX | VBA | [GitHub Repo](#)

Role Overview

Excel-based dashboard analyzing medical and eyecare supply chain inventory levels, flagging stock-out and overstock risk to support procurement decisions.

Key Responsibilities

- Built a relational data model in Power Pivot with custom DAX measures
- Automated stock-risk flagging and data refresh using Power Query and VBA
- Designed an interactive dashboard to monitor inventory levels across categories

Business Impact

- Reduced manual monitoring effort through automation
- Improved visibility into stock-out and overstock risk to support faster procurement decisions

Pizza Sales — Python EDA

Tools: Python | Pandas | Matplotlib | Seaborn | [GitHub Repo](#)

Role Overview

Python/Pandas project cleaning genuinely messy, real-world pizza sales data and exploring sales and ordering patterns.

Key Responsibilities

- Cleaned inconsistent raw data — mixed date formats, typo-ridden categories, and inconsistent price formatting
- Performed exploratory data analysis using Pandas, Matplotlib, and Seaborn
- Explored revenue trends, top-selling items, and order-timing patterns

Business Impact

- Turned messy raw sales data into clean, business-ready insights
- Identified top-selling items and peak ordering times to support business decisions

EDUCATION

Bachelor of Commerce (B.Com) — Pursuing, 2nd Year

G.S. Mahavidyalaya, Jamdeeh, Basti (Affiliated with Siddharth University)

Intermediate — 81.6%

High School — 93.6%

TRAINING & CERTIFICATION

Data Analytics | CodeWithHarry

Data Visualisation | Forage

MySQL | Simplilearn

Advanced Python | Simplilearn

Microsoft Excel | Simplilearn

Microsoft Power BI | Simplilearn

One Million Prompts / Prompt Engineering | Dubai Future Foundation

TECHNICAL PROFICIENCIES

- **Data Analysis & Visualization:** Excel (Power Query, Power Pivot, PivotTables, DAX), Power BI, Matplotlib, Seaborn
- **Databases:** MySQL, SQL (joins, CTEs, window functions, star-schema data modeling)
- **Programming:** Python (Pandas, NumPy) for data cleaning, analysis, and automation — with AI-assisted workflows for advanced tasks
- **Automation:** VBA, Power Query
- **Tools & Platforms:** Jupyter Notebook, Git & GitHub, Google Sheets
